CRM DECISION GUIDE · NOVEMBER 2026

Do it once. Do it right.

One connected platform for ENFRA's multi-year energy partnerships: from the EaaS team's 6–18 month pursuits today, to every ENFRA team tomorrow.

For: ENFRA leadership and evaluation team **Built on:** ENFRA's six evaluation criteria **Reading time:** about 5 minutes

WHAT YOU TOLD US

Your goals, in your words

Today, multi-million-dollar pursuits are tracked across spreadsheets, three CRMs, and email follow-up that never reaches a shared system. Here's what ENFRA asked for instead.

See every long pursuit clearly

> "Milestones, projected vs. actual dates, and key activities"
> ENFRA evaluation criteria

> "Exception reporting and management visibility"
> ENFRA evaluation criteria

Leaders should see what slipped, and why, before it shows up in the quarter.

Business-led and Snowflake-ready

> "Integration approach, particularly with Snowflake"
> ENFRA evaluation criteria

> "Ability to adapt the platform after go-live"
> ENFRA evaluation criteria

A platform the business owns and changes without code, connected to your existing data investment.

Start focused, then grow

> "Think big, act small."
> ENFRA team

> "Do it once, do it right."
> ENFRA team

Begin with the EaaS sales and marketing team, prove value, then extend across ENFRA.

YOUR EVALUATION CRITERIA

How Salesforce meets all six

Each criterion below maps to what ENFRA's team saw in the October 19 demonstration, or to the plan we'll walk through together.

1

Target market (TAM) management

ENFRA's own tiers, sectors and transaction types as fields, duplicate rules so two reps don't work the same customer, and AI-assisted account enrichment.

Seen in the 10/19 demo

2

Communication & activity

Emails and meetings from Outlook captured to the right account and deal, with follow-up tasks created automatically.

Seen in the 10/19 demo

3

Deal lifecycle

ENFRA's stages with projected vs. actual milestone dates, slippage tracking and an exceptions dashboard for leadership.

Seen in the 10/19 demo

4

Campaign management

Segments built from CRM data, templates with dynamic content, event RSVPs with automatic follow-up, and results on the record sellers already use.

Seen in the 10/19 demo

5

Implementation & flexibility

A focused Phase 1, no-code configuration your team can keep changing after go-live, and zero-copy access to Snowflake when you're ready.

Phased plan below

6

Three-year total cost

One clear view of licensing, implementation and support across three years, with nothing left to add later.

We'll review it with you directly

HOW WE COMPARE

Where ENFRA's needs point to Salesforce

Microsoft Dynamics 365 and HubSpot are both capable platforms. On the three challenges that matter most to ENFRA, here's how each one approaches them, based on each vendor's own public documentation.

The 18-month pursuit

Your criteria: “Milestones, projected vs. actual dates, and key activities” and “Exception reporting and management visibility.”

SALESFORCE

ENFRA's stages, projected and actual milestone dates, and exception flags live on the opportunity, with pipeline, slippage and exception dashboards built in. It's what you saw on October 19. [8]

HUBSPOT

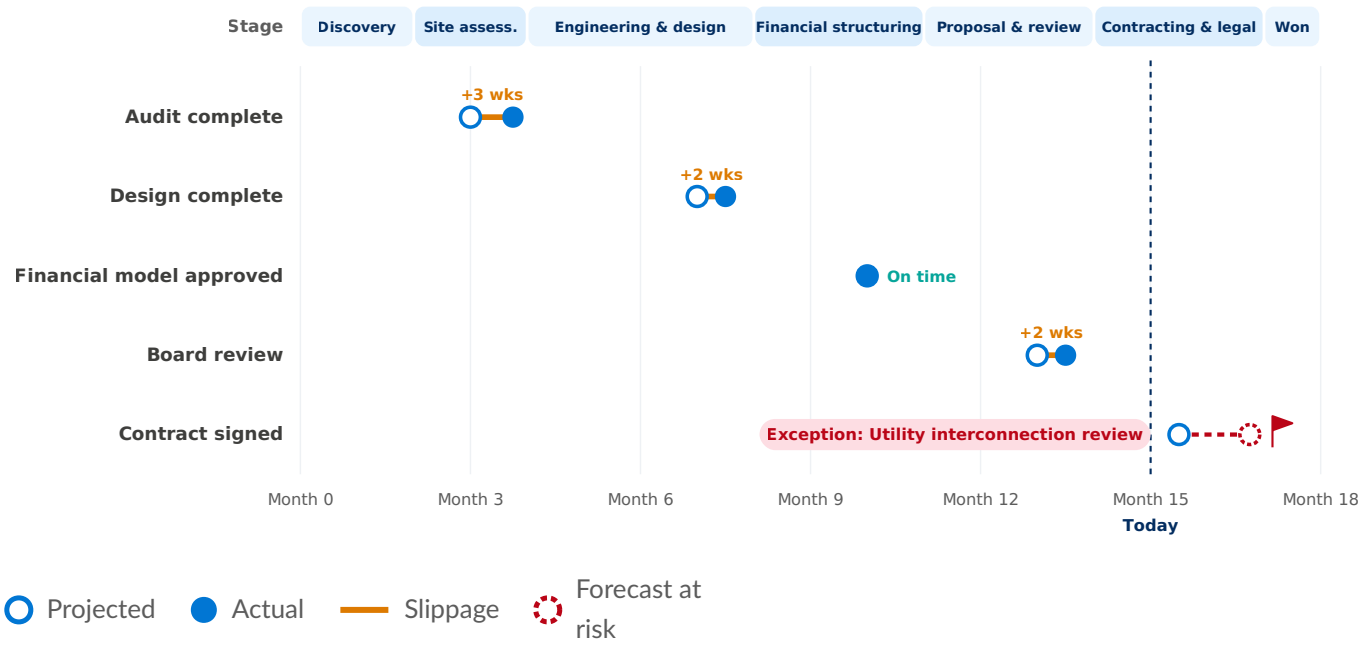

Deal stages are standard. Tracking milestones as their own records requires custom objects, which are available only on Enterprise subscriptions. [1]

MICROSOFT DYNAMICS 365

Reporting and dashboards are included. For advanced analytics, Microsoft points to Power BI, a separate product. [6]

What leadership sees: one pursuit, every milestone

Illustrative view based on the fictional “Midwestern State University: Campus Solar & Microgrid” pursuit from the October 19 demo.

Snowflake, without a data project

Your criteria: “Integration approach, particularly with Snowflake” and “Data migration requirements.”

SALESFORCE

Data 360 Zero Copy with Snowflake works in both directions and is generally available. Your data stays where it lives, with no ETL pipelines to build or maintain. [7]

HUBSPOT

Snowflake integrations require Data Hub Enterprise and sync on a schedule you choose, from hourly to daily. [2]

MICROSOFT DYNAMICS 365

Dynamics 365 data reaches Snowflake through Microsoft Fabric (Link to Fabric and OneLake) or through Snowflake's Dataverse connector, which replicates selected tables. [4]

How ENFRA's Snowflake data connects to CRM

Simplified from each vendor's documentation.

Salesforce
Data 360 Zero Copy

Sales Cloud ⇄ Data 360 ⇄ Snowflake

Zero copy · both directions · generally available

HubSpot
Data Hub Enterprise

HubSpot CRM ⇄ Snowflake — Scheduled sync, hourly to daily

Microsoft Dynamics 365
Dataverse

Dynamics 365 → Link to Fabric · OneLake ⇄ Snowflake

or Snowflake's Dataverse connector (replicates selected tables)

Grow from EaaS to all of ENFRA

Your goal: “Think big, act small.” Start with the EaaS team, then extend across ENFRA, without re-platforming.

One path, one platform

The same Salesforce platform carries ENFRA from Phase 1 to company-wide.

1

EaaS sales & marketing

About 25 users: accounts, opportunities, pipeline, activity capture and email campaigns.

2

Snowflake + AI

Zero Copy with Snowflake and Agentforce for Sales, when you're ready.

3

Company-wide

More ENFRA teams on the same data model, dashboards and processes.

SALESFORCE

One Core edition includes Slack Business+, Tableau Next, the Premier Success Plan and 500K Flex Credits per org, plus sandboxes to test changes before they go live.[8]

HUBSPOT

Custom objects and sandboxes for safely testing changes are Enterprise-tier features.[1,3]

MICROSOFT DYNAMICS 365

Dynamics 365 Sales, Customer Insights (marketing journeys) and Microsoft 365 Copilot are sold as separate products.[5]

QUESTIONS TO ASK EVERY VENDOR

Put every platform to the same test

Use these with each vendor in your evaluation, including us. Check them off as you get answers.

- [ ] Can we track projected vs. actual dates for every milestone and flag exceptions, on the edition you're quoting?
- [ ] Which edition or add-on is required for custom objects and a sandbox to test changes?
- [ ] Does our Snowflake data stay in Snowflake, or is it synced or copied? How often, and in which directions?
- [ ] Which products are required for CRM, email campaigns, analytics and AI, and what does each include?
- [ ] After go-live, can our own team change stages, fields and reports without a partner?
- [ ] What does it take to extend from 25 EaaS users to other ENFRA teams?

THE PLAN

A focused Phase 1 you can build on

Think big, act small: launch fast with the EaaS team, prove value, then extend.

PHASE 1 · NOW

EaaS sales & marketing

Accounts, opportunities, pipeline, activity capture and email marketing for about 25 users. Quoting, service and ERP integrations stay out of Phase 1 to keep the launch fast.

PHASE 2

Snowflake + AI

Zero Copy with your Snowflake environment and Agentforce for Sales, without a migration project.

NEXT

Across ENFRA

Extend to more teams on the same platform, data model and dashboards.

Next step: an architecture session

Your Snowflake environment, Microsoft 365, and your roadmap, with your business and data teams together.

Schedule with your Salesforce team
